

Project 14 – DNS Packet Filter / Monitor

- Parse UDP DNS traffic and apply simple policies or telemetry.
 - Detect DNS queries and responses
 - Count per-query type or per-client usage
 - Block one configurable domain pattern or RR type
 - Nice extension: Export simple DNS stats dashboard from user space.
- In P4, use Kathara
 - full DNS parsing is limited but partial fixed-offset parsing is enough for a small task.
- In XDP, deeper parsing is easy
